

# RE-CLEAN Our Future

Dedicated to moving towards a resource-circulating society

# Resource circulating solutions for our communities, through our people

Re-Clean Holdings is a renewable energy and environmental services company that develops and operates waste-to-energy and waste treatment facilities, consistent with the government's objective of achieving a **"resource-circulating society"** (as articulated by the Ministry of Environment).

Re-Clean's current portfolio of facilities consists of **Food Waste Recycling, Solid Refuse Fuel** (SRF)/Bio-SRF production and **Combined Heat & Power** (CHP) which are managed by accomplished staff, many with over 20 years of experience.

Re-Clean is a leader of Korea's movement towards an innovative resource-circulating society by delivering clean and sustainable solutions for our communities, through our people.

## Recycling our resources

### SIZE & LOCATIONS

World class assets

Best practice facilities delivered through Korean expertise and know-how

Constructed and operating to the highest standards internationally

### EXPERIENCED MANAGEMENT

Creating opportunities

Creating over 400 jobs through our project sites in regional communities

Management led by industry leaders

### FAVORABLE REGULATIONS

Resource circulation act

Minimising landfilling and incineration where no valuable product is produced and maximising recovery

Reducing dependency on nuclear & coal generation

### PROMOTING INVESTMENT

Private investment for public policy

Reduced burden on public funding

Improving environment conditions by moving towards 20% renewable target

## “ Sustainable solutions for our communities ”

I am pleased to welcome you to our website on behalf of Re-Clean Holdings Limited.

Re-Clean Holdings delivers on its ambition to create a sustainable environment for our communities and the next Generation through active and innovative investment and activities in the field of environmental services and renewable energy.

As a leading company in the environmental services and renewable energy industry, Re-Clean Holdings promises to strive to become an investor/operator that everyone can trust by establishing a higher level of operating standards and fulfilling its social responsibilities.

In addition, in the virtuous cycle of recycling various wastes and turning them into resources, we will strive to create opportunities to contribute more and grow together in the local community through continuous development and improvement by introducing a creative process based on new technology and presenting the new business paradigm to the environmental industry through application of global WHSE (Workplace Health, Safety and Environment) standards.

We are grateful for the support and encouragement of our investors, customers, partners, and various stakeholders. In return Re-Clean Holdings is striving to become a leader and a role model in the global environmental industry and hopes to create new values in the environmental business. All employees of Re-Clean Holdings and its affiliates will do its best to make it true.

Once again, I would like to thank you all for your interest in Re-Clean Holdings. Re-Clean Holdings dedicates to become a total solution provider in the emerging environmental business and will go forward to create a cleaner, happier, more beautiful, and more sustainable world.

### Re-Clean Holdings CEO

Jungtae Kim

# Reshaping our industry

Over the past three decades there has been continuous improvement through education, government reform and technology advances which has led to Korea's waste management system being one of the most advanced in Asia.

Reform in Korea's waste management system is driving a near-term window of opportunity in the waste treatment sector.

# Refueling our economy

With the scale back of coal and nuclear power in Korea, the environmental services and renewable energy industry has become crucially important for sustainable development and national welfare and will generate growth in the Korean economy.

Re-Clean's current portfolio includes the largest food waste treatment facility in Korea capable of treating 540 tons per day to produce compost, animal feed and bio-diesel fuel. Re-Clean also has combustible and wood waste treatment facilities that are capable of processing 750 tons per day to produce SRF and Bio-SRF for power plants and manufacturing companies. Re-Clean is now building power plants adjacent to these sites which will generate electricity while reducing transportation costs as well as emissions.

Re-Clean plans to continue expansion of base assets and market consolidation to achieve critical mass, seek value chain integration and develop best-in-class technical and operational know-how. Re-Clean is targeting **>100MW power generation** and **>1 million ton pa** waste treatment and to become the **market leader in key regions**

# Rebalancing our communities

Re-Clean aims to provide significant **benefit to our communities and revitalise the local economy**.

Re-Clean currently employs over 60 local residents across our existing projects with the plan to increase this to over 400 people for the construction and operation of all project sites.

ReClean has funded a range of solutions to community issues including supporting an environmental project to preserve the natural habitat of migrating birds located in Geum Estuary, Seochon County. The project is run by an international NGO (BirdLife International) and supported by the Ministry of Environment.

Re-Clean will continue to promote balanced development in the rural areas where many of our project sites are located.
